## ABSTRACT OF THE DISCLOSURE

Disclosed is a silver halide photographic material which comprises at least one methine dye represented by the following formula (I):

$$\begin{array}{c}
Y \\
N \\
-(L^1 = L^2)_P
\end{array}$$

$$\begin{array}{c}
X \\
N \\
R
\end{array}$$

$$\begin{array}{c}
X \\
N \\
N \\
M
\end{array}$$

wherein Y represents a furan ring or a pyrrole ring, and Y may further be condensed with other 5- or 6-membered carbocyclic ring or heterocyclic ring, or may have a substituent; the bond between two carbon atoms in which Y is condensed may be a single bond or a double bond; Z represents an atomic group necessary to form a 5- or 6-membered nitrogen-containing heterocyclic ring, and Z may further be condensed with other 5- or 6-membered carbocyclic ring or heterocyclic ring; R represents a substituted or unsubstituted alkyl group, aryl group, or heterocyclic group; D represents a group necessary to form a methine dye; L¹ and L² each represents a methine group; p represents 0 or 1; M represents a counter ion; and m represents a number of 0 or higher necessary to neutralize the charge in the molecule.
